SERUM ALDOSTERONE COMMENT:

Serum aldosterone has substantial physiological variation and interpretation may be difficult.
 Plasma renin activity is a more useful initial test in the evaluation of hypertension.

Serum Aldosterone Reference ranges-

Recumbent (Lying)..... 30-440 pmol/L
 Ambulant (Standing)..... 110-860 pmol/L

Note: These ranges are for serum or heparin plasma.
 EDTA plasma yields results approximately 15% higher.
