INTEGRATIVE MEDICINE

	Result	Range	Units	
URINE, 24 HOUR OXALATE	0.58	0.00 - 0.60	mmol/24h	

Oxalate is a natural end product of metabolism in the body. It should leave your body through your urine. If your oxalate levels are too high, the extra oxalate can combine with calcium to form kidney stones. These stones are hard masses of chemicals that can get stuck in the urinary tract.
