Digestive Markers Comment

PANCREATIC ELASTASE: Normal exocrine pancreatic function.
 Pancreatic Elastase reflects trypsin, chymotrypsin, amylase and lipase activity.
 This test is not affected by supplements of pancreatic enzymes.
 Healthy individuals produce on average 500 ug/g of PE-1. Thus, levels below 500 ug/g and above 200 ug/g suggest a deviation from optimal pancreatic function.
 The clinician should therefore consider digestive enzyme supplementation if one or more of the following conditions is present:
 Loose watery stools, Undigested food in the stools, Post-prandial abdominal pain, Nausea or colicky abdominal pain, Gastroesophageal reflux symptoms, Bloating or food intolerance.
